

EARLY WARNING DENTAL TEST

Your dog's kisses may contain more than just love

Harmful bacteria causes tooth problems and pain and puts your dog at risk for life-threatening illness.

An estimated 60 million dogs have gum disease by age 3. You can now identify the bacteria that commonly cause this problem at a very early stage.

K9 Smiles is a simple oral swab test that is recommended yearly to help keep your dog happy and healthy. The test is covered by most pet insurance plans when part of your vet's plan of care.
